

ANNEX IV: INSTALLATION AND DEPLOYMENT MANUAL

Profile: Evaluation Panel and technical staff

Manual Version: 1.0

Date: December 3, 2025

Table of Contents

1. System Requirements	[Page 2]
2. Database Preparation	[Page 2]
• 2.1. Creating structure and loading data	
3. Restoration of Multimedia Assets (Images)	[Page 3]
• 3.1. Downloading the media package	
4. Backend (Server) Configuration	[Page 3]
• 4.1. Installation of dependencies	
• 4.2. Environment variables (.env)	
5. Frontend (Client) Configuration	[Page 5]
• 5.1. Installation of dependencies	
• 5.2. Environment variables (.env)	
6. Project Execution	[Page 6]
7. Proof Credentials	[Page 7]
8. Common Problem Solving	[Page 8]

1. System Requirements

For the correct deployment of the **GymNomads** application in a local environment, Make sure you meet the following prerequisites:

- **Operating System:** Windows 10/11, macOS or Linux.

- **Node.js:** Version **v22.20.0** (or higher LTS).

- **Server Environment (Recommended): XAMPP (v8.x) .**

I strongly recommend its use as it provides the Apache server and the foundation of Preconfigured MariaDB/MySQL data as used in development.

- **Database manager: phpMyAdmin** (included in XAMPP) for visual tracking

This manual, although MySQL Workbench or DBeaver are also compatible.

- **Git:** (Optional) To clone the repository (currently private until its (approval).

2. Database Preparation

The database is located in the project's /bbdd folder. It is imperative to follow the **strict order** of script execution to maintain referential integrity.

1. Start the **Apache** and **MySQL** services in the XAMPP control panel.
2. Access your management tool (e.g., <http://localhost/phpmyadmin>).
3. Run the scripts provided in the /bbdd folder in the following order:

File Order		Description
1st	gymnomads_schema.sql	Create the gymnomads database and the empty tables. (Include DROP DATABASE IF EXISTS para clean previous facilities).
2nd	gymnomads_data.sql	Enter the System Administrator user.
3rd	seed_development_data.sql	Puebla, the database with 12 gyms, managers, users and test visits for simulate a real environment.

Note: If using the command line, it is recommended to use the "Shell" button in the Panel.

Control XAMPP and run:

`mysql -u root -p < bbbd/gymnomads_schema.sql` (y sucesivamente).

3. Restoration of Multimedia Assets (Images)

The code repository **does not include** the large images from gyms and users. to keep it lightweight. So that the application displays correctly (and not (show broken images), you must restore the assets manually.

1. **Download:** Access the following Google Drive link and download the image package:

the [Link to the GymNomads Asset Pack](#)

2. **Unzip:** Extract the contents of the downloaded file.
3. **Location:** Copy the gym_logo, gym_images, and profile_pictures folders within the following exact route of your project:

o .../gymnomads/backend/uploads/

Verification: The final structure should look like this:

gymnomads/backend/uploads/gym_logo/gym_logo1.png

4. Backend (Server) Configuration

1. Open a terminal and navigate to the server folder:

Bash

cd gymnomads/backend

2. Install the dependencies:

Bash

npm install

3. **Environment Variable Configuration:**

or Create a file called .env in the backend/ root.

or Copy the following content (adjust DB_PASSWORD if your MySQL (It has a password; by default in XAMPP it is empty):

Code fragment

DB_HOST=localhost

DB_USER=root

DB_PASSWORD=

DB_NAME=gymnomads

DB_PORT=3306

JWT_SECRET=creating_a_secret_ILERNA

BASE_URL=http://localhost:3000

5. Frontend (Client) Configuration

1. Open a **new terminal** and navigate to the client folder:

Bash

```
cd gymnomads/frontend
```

2. Install the dependencies:

Bash

```
npm install
```

3. Environment Variable Configuration:

or Create a file called `.env` in the root of frontend/.

Or copy the following content to connect to the backend and enable the email service (EmailJS):

Code fragment

```
VITE_API_BASE_URL=http://localhost:3000/api
```

```
VITE_BACKEND_BASE_URL=http://localhost:3000
```

```
# Test keys for evaluation (EmailJS)
```

```
VITE_EMAILJS_SERVICE_ID="service_ikywh3r5"
```

```
VITE_EMAILJS_TEMPLATE_ID="template_kt735wf"
```

```
VITE_EMAILJS_PUBLIC_KEY="0dgggK6OniU7GakeQ"
```

6. Project Execution

To use the application, both services must be running simultaneously.

Terminal 1 (Backend):

Bash

```
cd backend
```

```
npm run dev
```

Waiting for message: **Server running on port 3000**

Terminal 2 (Frontend):

Bash

```
cd frontend
```

```
npm run dev
```

Esperar mensaje: Vite vX.X.X ready in X ms

Access the application through your browser at: <http://localhost:5173>

7. Test Credentials

The "Seed" database includes pre-configured users to test all roles.

1. ADMINISTRATOR Role (Full Access)

- **Email:** admin@gymnomads.dev
- **Password:** admin123

2. Manager Role (Gym Management)

There are 12 managers, one for each gym. For example:

- **Spartan Gym (Madrid):** manager20@gymnomads.dev / manager123
- **Hercules Fitness (BCN):** manager21@gymnomads.dev / manager123

3. USER Role (Partner/Traveler)

Generic password: user123

- **Standard User:** user29@gymnomads.dev (Can log visits).
- **Limit Reached:** user20@gymnomads.dev (Has exhausted his 10 visits, blocking test).
- **Gym Deleted:** user40@gymnomads.dev (Belongs to a gym) removed, integrity test).

8. Common Problem Solving

- **Error: Port 3000 busy (EADDRINUSE)**

If you receive a port error when starting the backend, make sure you are not running another process of Node running. You can kill the processes from Task Manager or change the PORT in the .env file.

- **Database connection error (ECONNREFUSED)**

Verify that the MySQL service in the XAMPP panel is green (Running).

Verify that the credentials in backend/.env (DB_USER, DB_PASSWORD)

They coincide with those of your local installation.

- **The images are not loading on the web**

This error occurs if the folder structure is not exact. Verify that the path is gymnomads/backend/uploads/gym_logo and not backend/public/uploads or backend/uploads/uploads.
